**SPRAY CHARACTERISTICS**
- Uniform distribution with fixed possible alternation using direct liquid pressure alone.
- The standard spray angles of 40°, 60° or 80° are the nominal angles close to the nozzle orifice.
- For small capacity tips up to say 8 litres/hour the angle falls off rapidly a few inches from the tip. The larger the tip size the further the nominal angle projects before the spray begins to fall away.
- The nozzles produce a hollow cone spray but with the small capacity tips the spray rapidly merges into a “Solid” cone type.

**CONSTRUCTION AND MATERIALS**
- Nozzle tips precision machined to ensure most perfect spray available at low throughputs.
- Internal distributor, screw pin and strainers are renewable in most sizes.
- Available in Brass and 316 Stainless Steel as standard.
- Reusable Thread is "Unf - 24 UNEF.
- Adaptors are available with 1/4" Male BSP and 1/4" Female BSPP and can be ordered separately.
- Other materials available to special order.

**ORDER EXAMPLE**
WA 1408 Stainless Steel = Tip Only.
1/4” Male WA BB8 Brass = Complete Assembly.
